## DAGSBORO WATER DEPARTMENT WATER QUALITY REPORT

33134 Main Street, P.O. Box 420, Dagsboro, DE 19939 PWSID - DE00A0799 Report Created April 2008

We are very pleased to provide you with this annual water quality report for 2007. You will see that substances such as iron, chloride, and sodium are commonly found in drinking water. They occur naturally and, at trace levels, are not harmful to drink. The report shows at what levels these substances were found during tests conducted from Jan. 1, 2007 - Dec. 31, 2007, unless otherwise specified. If you have any questions about this report and the quality of your water, please call Stacy Long at (302) 732-3777. If you wish to learn more, please attend any of the regularly scheduled meetings of Mayor & Council held the fourth Monday of each month at 7:30 p.m. at the Bethel Center.

The water serving your home comes from the Millsboro Water Department via an interconnection. Millsboro has 3 wells, one located in the Manokin aquifer and the other two located in the Columbia aquifer. The Manokin aquifer is confined and is not subject to contamination from nutrients and pesticides. The Columbia aquifer is unconfined and is potentially subject to contamination from nutrients and pesticides. DNREC's source water assessment plan has been completed for the Millsboro Water Department. Copies can be obtained by contacting the Town of Millsboro at 302-934-8171 or by visiting the Source Water Assessment Program website at http://www.wr.udel.edu/swaphome/.

All sources of drinking water (whether a river, lake, spring, well, or pond) are subject to potential contamination by substances that are naturally occurring or man made. As water travels through the ground or over the surface of the land, it can dissolve naturally occurring substances, including radioactive substances. Additionally, some substances result from the presence of animals or human activity. These substances (both natural and man-made) can be microbes, inorganic or organic chemicals, pesticides/herbicides and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline mentioned above.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations established limits for contaminants in bottle water, which must provide the same protection for public health.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**90<sup>th</sup> PERCENTILE** - A calculation based upon averaging the 4<sup>th</sup> and 5<sup>th</sup> highest lead/copper readings, used to determine compliance with the Lead and Copper Rule.

**ACTION LEVEL** - The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements which a water system must follow.

**MAXIMUM CONTAMINANT LEVEL** - the "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**MAXIMUM CONTAMINANT LEVEL GOAL** - the "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**NON-DETECTS (ND)** - laboratory analysis indicates that the constituent is not present.

NOT REGULATED (N/R) - no MCL identified because this substances is unregulated.

PARTS PER BILLION (PPB) - one part per billion corresponds to one minute in 2,000 years or a single penny in \$10,000,000.

PARTS PER MILLION (PPM) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

**PICOCURIES PER LITER (PCI/L)** – a measure of radioactivity in water.

	Unit of	Highest Level	Ideal Goal	Highest Level	Annual			
Parameter	Measure	Allowed (MCL)	(MCLG)	Detected	Range	Major Sources		
Organic & Inorganic Contaminants								
Ethylbenzene	ppb	700	700	5.3	nd – 5.3	Discharge from petroleum refineries.		
Nitrate	ppm	10	10	5.7	5.6 – 5.7 (see note 1)	Erosion of natural deposits. Runoff from fertilizer use.		
Toluene	ppb	1000	1000	8	nd - 8	Discharge from petroleum factories.		
Trichloroethene	ppb	5	0	1.8	nd – 1.8	Discharge from metal degreasing sites.		
Xylenes, total	ppb	10000	10000	21	nd - 21	Discharge from chemical factories.		
ryionos, tetai	ppo	10000	10000		110 21	Discharge from oriented factories.		
Disinfection/Disinfection By-Products								
Chlorine, free & total residual	ppm	4	4	1.2	nd – 1.2	Disinfectant used in drinking water industry.		
Haloacetic Acids, total	ppb	60	n/a	5.2	n/a	By-product of drinking water chlorination.		
Bromochloroacetic Acid	ppb	n/r	.,,	2.4	n/a	,,,		
Dibromoacetic Acid	1 1	n/r		2.6	n/a			
Dichloroacetic Acid	1 1	n/r		2.6	n/a			
Trihalomethanes, total	ppb	80	n/a	12.2	n/a	By-product of drinking water chlorination.		
Bromodichloromethane		n/r	11/ 🔾	3.9	nd – 3.9	,,		
Bromoform	ppb	n/r		1.3	nd – 1.3			
Chloroform	ppb	n/r		2.4	nd – 2.4			
Dibromochloromethane	ppb	n/r		4.7	nd – 4.7			
Dia on come on canana	ppe	11,1		111	110 111			
Unregulated Contaminants								
1,2,4-Trimethylbenzene	ppb	n/r		5.5	nd – 5.5			
1,3,5-Trimethylbenzene	ppb	n/r		1	nd - 1			
Alkalinity, Total	ppm	n/r		33	30 - 33			
Chloride	ppm	n/r	250	14.1	14 – 14.1			
Hardness, Total	ppm	n/r		26.5	n/a			
Iron	ppb	n/r	300	70	nd - 70			
n-Propylbenzene	ppb	n/r		1	nd – 1			
pH, Field	0-14 scale	n/r		6.7	6.5 – 6.7			
Sodium	ppm	n/r		16.1	15 – 16.1			
Solids, Total Dissolved	ppm	n/r	500	126	n/a			
	F F ···							
Lead & Copper		Action Level		90 <sup>th</sup> Percentile				
90th Percentile Lead	ppb	15	0	11	nd – 26	Corrosion of household plumbing systems,		
Number of Sites Exceeding Lead Action Level	11.		-	2	<u> </u>	erosion of natural deposits		
			L	2 prodicti di fiaturai deposito				
90th Percentile Copper	ppb	1,300	0	278	35 - 613	Corrosion of household plumbing systems,		
Number of Sites Exceeding Copper Action Level				0	-	erosion of natural deposits		
5 11								

Microbiological Contaminants Total Coliform Negative results in 100% of monthly samples collected. One coliform sample per month is taken.

Naturally present in the environment.

## Contaminants tested for, but not found. Synthetic Organic Contaminants (Pesticides/Herbicides/Insecticides) 1,2-Dibromo-3-Chloropropane Benzo(g,h,i)perylene Heptachlor Benzo(k)fluoranthene **Inorganic Contaminants** 1.2-Dibromoethane Heptachlor Epoxide 2,4,5-TP (Silvex) Bis(2-ethylhexyl) phthalate Antimony Mercurv Hexachlorobenzene Arsenic Nickel 2,4-D Butachlor Hexachlorocyclopentadiene Barium Nitrite 2.4-dinitrotoluene Butylbenzylphthalate Indeno(1,2,3-cd)pyrene Selenium Carbarvl Lindane Bervllium 2.6-dinitrotoluene Cadmium Carbofuran Thallium 2-Methyl Naphthalene Methiocarb Chromium 3-Hydroxycarbofuran Chvrsene Turbidity Methomyl Fluoride 4.4'-DDE Dalapon Methoxychlor Di(ethylhexyl)adipate Metolachlor Acenaphthene Acenaphthylene Dibenzo(a,h)anthracene Metribuzin **Radiological Contaminants** Acetchlor Dibenzofuran Molinate **Gross Alpha Emitters** Acifluorfen Dicamba Oxamyl (Vydate) **Gross Beta Emitters** Alachlor Dieldrin **PCBs** Aldicarb Pentachlorophenol Diethylphthalate Dimethyl phthalate **Disinfection By-products** Aldicarb Sulfone Phenanthrene Monobromoacetic Acid Aldicarb Sulfoxide Di-n-butylphthalate Picloram Monochloroacetic Acid Aldrin Dinoseb Propachlor Trichloroacetic Acid Anthracene Endrin Propoxur Pyrene Atrazine Eptam (EPTC) Benzo(a)anthracene Ethylene Dibromide Simazine Benzo(a)pyrene Fluoranthene Terbacil Benzo(b)fluoranthene Fluorene Toxaphene **Volatile Organic Contaminants** 1,1,1,2-Tetrachloroethane 2,4,5-trichlorophenol Chloroethane Naphthalene 1,1,1-Trichloroethane 2-Butanone (MEK) n-Butylbenzene Chloromethane 1,1,2,2-Tetrachloroethane 2-Chloroethylvinyl Ether cis-1.2-Dichloroethene n-Propylbenzene 1.1.2-Trichloroethane 2-Chlorotoluene cis-1.2-Dichloroethene o-Xvlene 1.1-Dichloroethane 2-Hexanone cis-1,3-Dichloropropene sec-Butylbenzene 1.1-Dichloroethene 3-chloro-1-propene Dibromomethane Stvrene 4-Chlorotoluene Dichlorodifluoromethane tert-Butylbenzene 1,1-Dichloropropene 1,2,3-Trichlorobenzene 4-Isopropyltoluene Ethyl methacrylate Tetrachloroethene 1,2,3-Trichloropropane Acetone Hexachlorobutadiene Tetrahvdrafuran (THF) tr-1,2-Dichloroethene 1,2,4-Trichlorobenzene Acrylonitrile lodomethane 1,2,4-Trimethylbenzene Benzene Isopropylbenzene tr-1,3-Dichloropropene
